

Technology Questions... Today we are more dependent on technology than ever. Consider how important your computer and computer systems are in your personal life and in the day to day operations of your business. Technology seems to give us many opportunities for questions that begin like this: Why did my computer... Where did my data go... Why did my printer stop working... How do I connect my... How do I make this thing... and more...

Consider some questions regarding technology in your life or business

- Problems with your business network? Is it setup correctly? Are you having constant problems with shared data, your printers or your server?
- What would happen if one of your computers crashed? Do you have backups and a backup plan? Who would you call?
- Do you need a more efficient way to manage your business data?
- People are using the web as their first source to find out about products and services. Does your business have a web site?
- Are you having problem with a particular PC? Can't get your printer to work? Computer running slow or making funny noises?
- Would you like your customers and clients to access data related to your business from the Internet?
- Who do you call when you have computer problems?
